> JP2000345041A2: COMPOSITION FOR FORMING FILM, PRODUCTIC 양Title:

COMPOSITION FOR FORMING FILM, AND MATERIAL FOR FORMING

INSULATION FILM

Composition for film formation for production of semiconductors, 郞Derwent Title:

comprises a product of hydrolysis and condensation obtained by

hydrolyzing and condensing organosilicon compound(s) [Derwent Record]

> PROBLEM TO BE SOLVED: To obtain a composition having **PAbstract**:

improved storage stability and giving a film improved in uniformity, permittivity, and leak current characteristics by selecting a

composition containing a hydrolyzate of a silane compound or a condensate of the hydrolyzate and having a specified propylene

alvcol content.

SOLUTION: This composition contains at least either of a hydrolyzate and/or a condensate selected from a compound of formula I and a compound of formula II and a solvent of formula III of a purity of 99% (as measured by gas chromatography) and has a propylene glycol content of 10,000 ppm or below. In the formula, R1 is H, F, or a monovalent organic group; R2 to R6 are each a

monovalent organic group; a, b, and c are each 0-2; R7 is O or -(CH2)n-: in formula II, n is 1-6; d is 0 or 1; R8 and R9 are each a monovalent organic group selected from H, a 1-4C alkyl, and CH3CO-; and e is 1-2. The composition desirably has an iron content and a sodium content each of which is 15 ppb or below and may contain a β -diketone, a compound having a polyalkylene oxide

structure, or the like. COPYRIGHT: (C)2000, JPO
